

v1.0

THE CLIENT ENGINE

The AI system behind every top coach & consultant's business.

5 Systems · 15 Modules · 35 Operators · 7 System Chains · 3 Bonus Assets

Built for coaches, consultants & service providers who'd rather spend time
with clients than staring at a blank page.

The 5-System Loop

This is not a collection of prompts. It's a connected operating system — each System feeds the next, and System 5 loops back into System 1.

How This Tool Works

The 5 Systems, in one line each

- **S1 Acquisition** — Qualify → build rapport → handle hesitation → present the right offer
- **S2 Conversion** — Confirm pricing/scope → formalize the agreement → onboard smoothly
- **S3 Delivery** — Structure the engagement → run sessions/programs → track progress
- **S4 Retention & Growth** — Surface upsell opportunities → capture proof of results → generate referrals
- **S5 Visibility** — Produce consistent content → sharpen positioning → nurture the audience

How to use an Operator

Fill in the bracketed placeholders → run it in ChatGPT, Claude, or your preferred AI tool → treat the output as a strong first draft, then adjust tone if needed.

Which System Do I Need Right Now?

- Chasing leads or running discovery calls? → **Start in System 1: Acquisition**
- Have a signed client but haven't onboarded them? → **Start in System 2: Conversion**
- Actively delivering sessions to clients? → **Start in System 3: Delivery**
- Happy clients but no consistent referrals/testimonials? → **Start in System 4: Retention & Growth**
- Struggling with consistent content or visibility? → **Start in System 5: Visibility**

What this isn't for: De-escalating an actively dissatisfied or upset client. That conversation deserves your direct, personal attention.

v1.0 — this system is updated as AI tools evolve, at no extra cost to you.

Your Notion Dashboard

This PDF is one half of The Client Engine. The other half is a live, searchable Notion dashboard — same 35 Operators, 7 Chains, and 3 Assets, but filterable and one-click-copy.

- 1 Click your Notion dashboard link (included with your purchase, separate from this PDF).
- 2 Click the **"Duplicate"** button in the top-right corner of the page that opens.
- 3 It copies into your own Notion account — fully set up, nothing to build. Operators, Chains, Assets, and a Start Here guide, ready to use immediately.

Don't have a Notion account? Sign up free at notion.so (takes under a minute), then click your dashboard link.

Can't find your link? Check the separate "Get Your Notion Dashboard" page included in your download — the link lives there.

Your Notion Dashboard

This PDF is your onboarding read. The Notion dashboard is where you'll actually work day-to-day — searchable, filterable, and built to duplicate into your own account in one click.

- 1 Open your dashboard link: https://glowing-fibula-314.notion.site/Start-Here-3a8c3147da1480f6bd3fea90a35a4ed4?source=copy_link
- 2 Click the **"Duplicate"** button in the top-right corner of the page.
- 3 It copies into your own Notion account, fully set up — Operators, Chains, Assets, and the Start Here guide, ready to use.

Don't have a Notion account? Sign up free at notion.so (takes under a minute), then click the link above.

SYSTEM 1

Acquisition

INPUT

A cold or warm lead who's shown interest (inquiry, referral, or booked discovery call)

PROCESS

Qualify → build rapport → handle hesitation → present the right offer

OUTPUT

A signed agreement, ready to move into System 2: Conversion

S1.M1 Discovery Call Prep & Scripts

S1 • Acquisition

Pre-Call Research Brief

WHEN TO USE THIS

The night before or morning of a discovery call — never walk in cold.

WHAT YOU NEED BEFORE RUNNING IT

Whatever you have on the prospect — website, LinkedIn, referral note, or inquiry form answers. Partial info is fine.

THE OPERATOR

Role: You are a sales research assistant for a solo coach/consultant preparing for a discovery call.

Context: I have a discovery call with a prospect in [industry/niche]. Here's what I know about them: [paste info – website copy, LinkedIn, referral notes, inquiry form answers].

Objective: Help me walk into this call sounding like I already understand their world.

Constraints:

- Base every point on what I've actually given you – flag clearly if you're inferring rather than confirmed
- Avoid generic industry statements that could apply to any business in this space

Output format:

1. 3 likely pain points specific to their situation (not generic to their industry)
2. 2 sharp diagnostic questions that would reveal their real problem, not surface symptoms
3. 1 assumption I should explicitly avoid making about them

Quality bar: Someone reading this brief should be able to open the call sounding like they've already done homework, not like they Googled the industry.

EXPECTED OUTPUT

A short, scannable brief — three sections, readable in under a minute before the call starts.

HOW TO USE THE OUTPUT

Keep it open in a second tab during the call. Use the diagnostic questions as your actual opening questions.

EXAMPLE

Prospect is a wellness studio owner who mentioned 'struggling to fill classes' → brief surfaces the real issue is likely retention, not lead volume, and flags 'don't assume they need more marketing' as the avoid-assumption line.

SYSTEM CONNECTION

Feeds directly into Discovery Call Script Builder — the pain points and questions become the script's diagnostic section.

Discovery Call Script Builder

WHEN TO USE THIS

Once you have a call booked and know the prospect's stated problem — building your actual talk track for the call.

WHAT YOU NEED BEFORE RUNNING IT

The prospect's stated problem, your offer in one sentence, and your natural conversational tone.

THE OPERATOR

Role: You are a sales conversation designer for solo coaches/consultants who need a natural, non-scripted-sounding call structure.

Context: I have a discovery call for a [type of service] with a prospect whose stated problem is: [problem, in their own words if possible]. My offer: [one-sentence offer description]. My natural tone: [e.g., direct, warm, no-nonsense].

Objective: Build a call structure I can internalize, not read word-for-word.

Constraints:

- Write it as talking points and question prompts, not a verbatim script
- Match the tone I specified throughout
- Do not include generic sales phrases ("Let me tell you why we're different")

Output format:

1. Opening rapport line (specific to their situation, not generic small talk)
2. 3-4 diagnostic questions building on their stated problem
3. A natural transition line into presenting the offer
4. A soft close asking for a clear next step

Quality bar: I should be able to glance at this once before the call and speak naturally, not sound like I'm reading a script.

EXPECTED OUTPUT

A one-page call outline, structured but flexible.

HOW TO USE THE OUTPUT

Review once before the call. Use as a mental map, don't read verbatim.

EXAMPLE

Prospect's problem is 'I keep losing clients after 2 months' → transition line naturally bridges into a retention-focused offer, not a generic pitch.

SYSTEM CONNECTION

Built directly on Pre-Call Research Brief's output. Its close feeds into Opportunity Qualification & Next-Step Decision.

Lead Re-Engagement & Recovery

WHEN TO USE THIS

Any time a lead goes quiet — no-showed a call, canceled last-minute, or has been silent on your list for weeks. One Operator, three distinct modes.

WHAT YOU NEED BEFORE RUNNING IT

Which situation applies (Mode A/B/C), and any context on why (if known).

THE OPERATOR

Role: You are a relationship-repair copywriter for a solo coach/consultant re-engaging a gone-quiet lead.

Context: Situation — Mode A: No-Show Recovery / Mode B: Last-Minute Cancellation / Mode C: Cold Lead Re-Engagement. Choose one: [mode]. Additional context if known: [reason, prior interaction].

Objective: Write a message that reopens the door without sounding needy, passive-aggressive, or overly formal.

Constraints:

- No guilt-tripping language
- No fake urgency
- Mode A/B: light and understanding tone. Mode C: lead with value, not 'checking in'

Output format:

- One message, under 80 words
- End with a low-friction next step

Quality bar: The prospect should feel welcomed back, not chased.

EXPECTED OUTPUT

One ready-to-send message tailored to the chosen mode.

HOW TO USE THE OUTPUT

Mode A/B: send within 24 hours. Mode C: time alongside a content/newsletter touchpoint.

EXAMPLE

Mode A — a lead no-showed a discovery call → message is warm, assumes good intent, offers one easy rebooking prompt.

SYSTEM CONNECTION

Mode C is fed by the Nurture Sequence Outline (System 5) — cold leads loop back through this Operator.

The Follow-Up Toolkit

WHEN TO USE THIS

Any moment after initial contact where the ball is in the prospect's court — post-call same-day, 'let me think about it', or a sent-but-silent proposal. Three timed variants.

WHAT YOU NEED BEFORE RUNNING IT

Which variant applies, the prospect's name/situation, and (for proposals) what was proposed.

THE OPERATOR

Role: You are a follow-up strategist helping a solo coach/consultant stay present without being pushy.

Context: Variant needed: [same-day post-call recap / thinking-about-it follow-up / proposal-stale follow-up]. Prospect's name: [name]. Their stated concern or interest: [concern]. My offer/proposal: [brief description].

Objective: Move the conversation forward with the appropriate level of warmth and pressure for this specific variant.

Constraints:

- Same-day recap: warm, no ask beyond confirming next step
- Thinking-about-it: low-pressure, may include one new angle, never repeat the same pitch
- Proposal-stale: add one small new value point, don't just 'check in'
- Never sound automated or templated

Output format: One message, matched to the chosen variant, ending in a single clear next step.

Quality bar: Each variant should feel distinctly calibrated to how much time/rapport has passed.

EXPECTED OUTPUT

One tailored follow-up message for whichever moment you're in.

HOW TO USE THE OUTPUT

Send at the natural timing for that variant — same day, 3-5 days later, or a week+ after a proposal.

EXAMPLE

Proposal sent 6 days ago, silence → message adds one relevant insight and asks one direct yes/no-friendly question.

SYSTEM CONNECTION

Same-day variant follows Discovery Call Script Builder; proposal-stale variant follows Custom Proposal Draft and Tiered Package Proposal.

S1.M2 Qualification & Objection Handling

Opportunity Qualification & Next-Step Decision

WHEN TO USE THIS

Right after a discovery call, before deciding whether to send a proposal at all.

WHAT YOU NEED BEFORE RUNNING IT

Call notes, the prospect's stated goal, budget/timeline signals, and any hesitation or red flags noticed.

THE OPERATOR

Role: You are a sales qualification advisor helping a solo coach/consultant make a clear-eyed decision, not just chase every lead into a proposal.

Context: Call notes: [paste notes]. Prospect's stated goal: [goal].
Budget/timeline signals: [what they said or implied]. Anything that felt off or uncertain: [red flags, if any].

Objective: Give me an honest read on whether this is worth a proposal right now.

Constraints:

- Do not default to 'yes, send a proposal' — a poor-fit or premature verdict is a valid and useful answer
- Be specific about what's driving the verdict

Output format:

1. Verdict: Strong fit / Possible fit — needs clarification / Poor fit right now
2. The specific reasoning behind that verdict
3. If 'possible fit': exactly what to clarify before proceeding
4. If 'poor fit': a brief, professional way to decline or refer them elsewhere

Quality bar: This should save me from wasting a proposal on a lead that was never going to convert.

EXPECTED OUTPUT

A clear verdict with reasoning — not just encouragement to proceed.

HOW TO USE THE OUTPUT

Strong fit → Custom Proposal Draft. Possible fit → send one clarifying message first. Poor fit → decline gracefully.

EXAMPLE

N/A — *decision-gate Operator, output varies entirely by input.*

SYSTEM CONNECTION

Sits between Discovery Call Script Builder and Custom Proposal Draft — the decision gate the system needs.

Objection Response Builder

WHEN TO USE THIS

The moment a prospect raises a real hesitation, live on a call or in writing.

WHAT YOU NEED BEFORE RUNNING IT

The prospect's exact words, and your offer's core value.

THE OPERATOR

Role: You are a sales conversation coach helping a solo coach/consultant respond to a real objection with confidence, not scripts.

Context: The prospect just said: "[paste their exact objection]". My offer's core value: [one sentence].

Objective: Give me three genuinely different response angles I can choose from in the moment.

Constraints:

- Angle 1 must reframe value/outcome, not just restate price
- Angle 2 must be a genuine clarifying question
- Angle 3 must offer a smaller first step without discounting the core offer
- No pressure tactics, no false scarcity

Output format: 3 labeled response options, each 1-2 sentences, ready to say out loud.

Quality bar: Each option should sound like something a confident, non-desperate professional would actually say.

EXPECTED OUTPUT

Three short, distinct response options.

HOW TO USE THE OUTPUT

Pick the one that fits the room in the moment.

EXAMPLE

Objection: *"This is more than I expected to spend"* → Angle 1 reframes around cost of the problem persisting; Angle 2 asks about budget expectations; Angle 3 offers a smaller diagnostic session.

SYSTEM CONNECTION

If Angle 3 is chosen, often leads into Tiered Package Proposal.

S1.M3 Proposal Generation

Custom Proposal Draft

WHEN TO USE THIS

Immediately after a discovery call where the prospect gave a clear next-step yes.

WHAT YOU NEED BEFORE RUNNING IT

Their specific goal (in their words), your package details, price, and timeline.

THE OPERATOR

Role: You are a proposal writer for a solo coach/consultant, writing to persuade through clarity, not salesmanship.

Context: Client's goal, in their words: [goal]. My package includes: [list].

Price: [\$X]. Timeline: [duration].

Objective: Write a proposal that reads as tailored to their specific situation, not a copy-pasted service description.

Constraints:

- Open with THEIR situation, not my services
- No generic phrases like 'I'm passionate about helping...'
- Confident tone – present the price as a stated fact, not an apology
- Frame outcomes as intended results and areas of progress. Do not invent guarantees, unsupported claims, or unrealistic promises.

Output format:

1. Their situation today
2. What's possible
3. What's included
4. Investment and timeline
5. Clear next step

Quality bar: If you removed my name from this proposal, it should be obvious it was written specifically for this prospect.

EXPECTED OUTPUT

A complete, ready-to-send proposal document.

HOW TO USE THE OUTPUT

Send within 24 hours of the call. Follow with the Follow-Up Toolkit's proposal-stale variant if no response within a week.

EXAMPLE

Client goal is 'raise my prices without losing clients' → proposal speaks directly to pricing confidence and retention, not generic growth.

SYSTEM CONNECTION

Built from Opportunity Qualification's 'strong fit' verdict. Feeds Tiered Package Proposal and Plain-Language Agreement Summary (System 2).

Tiered Package Proposal

WHEN TO USE THIS

When you want to offer choice instead of a single yes/no price point — especially after a price objection.

WHAT YOU NEED BEFORE RUNNING IT

Your current single offer's full details.

THE OPERATOR

Role: You are a pricing strategist helping a solo coach/consultant convert one offer into a tiered structure.

Context: My current offer: [paste full details – what's included, price].

Objective: Split this into 3 tiers (Essentials / Core / Premium) that each feel genuinely distinct.

Constraints:

- Each tier's inclusions must differ in kind, not just quantity
- The middle tier should be positioned as clear best-value through inclusion design
- Evaluate each tier's pricing against: delivery effort required, access/support level, client transformation depth, coach profitability, and a sensible upgrade path between tiers – not just arbitrary spacing between numbers

Output format: 3 tiers, each with name, price, 3-5 inclusions, and one line on 'who this tier is for'.

Quality bar: A prospect should be able to self-select their tier in 10 seconds.

EXPECTED OUTPUT

A clean 3-tier breakdown ready to drop into a proposal or pricing page.

HOW TO USE THE OUTPUT

Present alongside or instead of a single-price proposal.

EXAMPLE

'\$2,000 for 8 weeks' becomes *Essentials (self-guided + monthly check-in)*, *Core (weekly sessions)*, *Premium (weekly + async support)*.

SYSTEM CONNECTION

Often triggered by Objection Response Builder's Angle 3. Feeds the Pricing Tier Sheet asset and Renewal Reminder (System 4).

SYSTEM 2

Conversion

INPUT

A signed agreement from System 1

PROCESS

Confirm pricing/scope → formalize the agreement → onboard smoothly

OUTPUT

An active, onboarded client → feeds into System 3: Delivery

S2.M1 Pricing & Packaging

S2 • Conversion

Price Justification Framer

WHEN TO USE THIS

Before or during a pricing conversation where you sense hesitation.

WHAT YOU NEED BEFORE RUNNING IT

Your price, the client's actual goal, and the cost of not solving their problem.

THE OPERATOR

Role: You are a pricing communication strategist for a solo coach/consultant, helping frame price around value without sounding defensive.

Context: Price: [\$X] for [service/package]. Client's goal: [goal]. Cost to them of the problem continuing unsolved: [be specific if known].

Objective: Give me talking points that justify this price through outcome and cost-of-inaction framing, not hours worked.

Constraints:

- No generic value language ('invest in yourself')
- Ground every point in the client's specific situation
- Keep it honest – do not invent numbers or outcomes not supported by context given

Output format: 3 short talking points, each usable verbatim.

Quality bar: Each point should make the price feel like the smaller number next to the cost of the problem persisting.

EXPECTED OUTPUT

3 ready-to-use talking points.

HOW TO USE THE OUTPUT

Weave into a pricing conversation naturally, or use in written proposals/follow-ups.

EXAMPLE

Client goal is 'stop losing 2 clients/month to poor onboarding' → talking points reframe price against revenue currently lost.

SYSTEM CONNECTION

Supports objection-handling moments carried over from System 1; feeds tone into Tiered Package Proposal.

Payment Plan Proposal

WHEN TO USE THIS

A client flagged full price as a barrier — before defaulting to a discount.

WHAT YOU NEED BEFORE RUNNING IT

Full price, and how many installments feels reasonable.

THE OPERATOR

Role: You are a payment structuring advisor helping a solo coach/consultant offer flexibility without devaluing their price.

Context: Full price: [\$X]. Preferred split range: [e.g., 2-4 installments]. Client's situation, if relevant: [context].

Objective: Draft 2 payment plan options and a short message offering them.

Constraints:

- Never frame this as a discount – total remains the same, only timing changes
- Keep the message confident, not apologetic
- Do not suggest interest-free extended terms beyond what's reasonable for a solo service business

Output format:

1. Two clear payment plan structures
2. A short message presenting them, ending with a simple choice

Quality bar: The message should read as 'here's how I make this work for you.'

EXPECTED OUTPUT

Two structured plan options plus one ready-to-send message.

HOW TO USE THE OUTPUT

Send in response to price hesitation, or include proactively for higher-ticket offers.

EXAMPLE

\$2,000 package → '\$1,000 now + \$1,000 in 30 days' or '3 monthly payments of \$667.'

SYSTEM CONNECTION

Often triggered directly out of Objection Response Builder (System 1) when the objection is about affordability.

Scope Clarification Message

WHEN TO USE THIS

A current client's requests are exceeding what they originally purchased.

WHAT YOU NEED BEFORE RUNNING IT

What's included in their package, and what they're now asking for beyond it.

THE OPERATOR

Role: You are a boundary-setting communication assistant for a solo coach/consultant managing scope creep professionally.

Context: Client's package: [package name/inclusions]. What they're now requesting beyond it: [the extra ask].

Objective: Write a message that reaffirms the existing scope and offers a path to get the extra request handled.

Constraints:

- Lead with warmth and willingness, not a rules-citation tone
- Clearly state what IS included before addressing what isn't
- Offer one concrete path forward rather than a flat no

Output format: One message, under 100 words, ending with a clear option to choose.

Quality bar: The client should feel the relationship is intact, not that they've been caught overstepping.

EXPECTED OUTPUT

One ready-to-send boundary-setting message.

HOW TO USE THE OUTPUT

Send as soon as scope drift is noticed.

EXAMPLE

Client on '4 sessions/month' starts requesting daily WhatsApp support → message reaffirms structure warmly and offers a paid add-on tier.

SYSTEM CONNECTION

Ties to Tiered Package Proposal (System 1) — scope requests often trigger an upsell, connecting forward to System 4.

S2.M2 Contracts & Agreement Language

Plain-Language Agreement Summary

WHEN TO USE THIS

Right before sending a formal contract.

WHAT YOU NEED BEFORE RUNNING IT

Your actual contract or agreement text.

THE OPERATOR

Role: You are a client-communication assistant translating formal contract language into plain, reassuring terms – not a legal advisor.

Context: Contract/agreement text: [paste text].

Objective: Summarize the key terms (scope, payment, timeline, cancellation policy) in plain language.

Constraints:

- Do not add, remove, or reinterpret any actual legal terms
- Flag clearly that this summary does not override the formal agreement
- Keep it under 200 words

Output format: A short summary organized by: what you're getting, what you're paying and when, timeline, and how to cancel if needed.

Quality bar: A client should read this in 90 seconds and feel confident about what they're signing.

EXPECTED OUTPUT

A short plain-language companion summary.

HOW TO USE THE OUTPUT

Send alongside the formal contract, not instead of it.

EXAMPLE

A dense 3-page service agreement becomes a 4-line summary.

SYSTEM CONNECTION

Sits after Custom Proposal Draft is accepted, before Welcome & First Session Setup.

Cancellation/Refund Policy Drafter

WHEN TO USE THIS

Before you need one — ideally before your first client.

WHAT YOU NEED BEFORE RUNNING IT

Your general approach and business type.

THE OPERATOR

Role: You are a policy-writing assistant helping a solo coach/consultant set clear, fair terms in advance.

Context: Business type: [type of service]. General approach: [e.g., no refunds after first session, prorated refund within X days, case-by-case].

Objective: Write a clear cancellation and refund policy that protects my time while remaining fair to clients.

Constraints:

- Professional but not overly legal/cold in tone
- Specific enough to remove ambiguity in an actual dispute
- Flag that for binding legal protection, a lawyer should review final contract language

Output format: A short policy section (100-150 words) ready to insert into a contract or FAQ.

Quality bar: Should answer 90% of 'what if I need to cancel' questions before a client asks.

EXPECTED OUTPUT

A ready-to-use policy paragraph.

HOW TO USE THE OUTPUT

Insert into your contract template and/or client-facing FAQ.

EXAMPLE

'No refunds after session 1; sessions may be rescheduled with 24 hours notice' becomes a full professional policy paragraph.

SYSTEM CONNECTION

Feeds into Plain-Language Agreement Summary and Welcome & First Session materials.

S2.M3 Onboarding

Welcome & First Session Setup

WHEN TO USE THIS

Immediately after a contract is signed.

WHAT YOU NEED BEFORE RUNNING IT

The client's stated goal, and what to prepare for session one.

THE OPERATOR

Role: You are an onboarding experience designer for a solo coach/consultant's new client.

Context: Client's goal: [goal]. What they should prepare/bring to session one: [detail].

Objective: Produce both a warm welcome message and a first-session agenda that make the client feel confident and excited.

Constraints:

- Welcome message should feel personal, referencing their specific goal
- First-session agenda should build rapport before diving into goal-setting
- Output should feel like one cohesive onboarding moment

Output format:

1. Welcome message (under 120 words): excitement, what happens next, what to prepare
2. First-session agenda: rapport opener → goal clarification → expectation-setting → clear close on next steps

Quality bar: The client should finish reading both and feel this is a well-run, professional engagement.

EXPECTED OUTPUT

A welcome message and structured first-session agenda, delivered together.

HOW TO USE THE OUTPUT

Send welcome message immediately upon signing; use agenda to structure the first call.

EXAMPLE

Client's goal is 'get promoted within 6 months' → welcome message references that ambition specifically.

SYSTEM CONNECTION

Follows Plain-Language Agreement Summary. Feeds Client Intake Questions Generator and Program Outline Builder (System 3).

Client Intake Questions Generator

WHEN TO USE THIS

Before the first session, to gather structured information.

WHAT YOU NEED BEFORE RUNNING IT

The type of client/service, and anything specific you always need to know.

THE OPERATOR

Role: You are an intake-design assistant helping a solo coach/consultant gather the right information before starting client work.

Context: Client type: [type]. Service: [service]. Anything specific I always need to know: [optional].

Objective: Generate intake questions that surface real goals, current situation, and expectations.

Constraints:

- Avoid yes/no questions where open-ended would reveal more
- Include at least one question surfacing what hasn't worked for them before
- Keep to 8-10 questions maximum

Output format: 8-10 intake questions, grouped loosely by theme (goals / current situation / expectations / past attempts).

Quality bar: Answers should give you everything needed to plan session one without asking twice.

EXPECTED OUTPUT

A ready-to-send intake question set.

HOW TO USE THE OUTPUT

Send as a form (via the Client Intake Form asset) or ask conversationally in session one.

EXAMPLE

For career coaching, questions surface not just 'what's your goal' but 'what have you already tried that didn't work.'

SYSTEM CONNECTION

Populates the Client Intake Form asset and feeds Program Outline Builder (System 3).

SYSTEM 3

Delivery

INPUT

An onboarded, active client from System 2

PROCESS

Structure the engagement → run sessions/programs → track progress

OUTPUT

A client experiencing real results → feeds into System 4: Retention & Growth

S3.M1 Program & Session Structuring

S3 • Delivery

Program Outline Builder

WHEN TO USE THIS

Right after onboarding, before the first working session.

WHAT YOU NEED BEFORE RUNNING IT

The client's goal, program length, and intake answers if available.

THE OPERATOR

Role: You are a program design consultant helping a solo coach/consultant structure a client engagement with clear phases and momentum.

Context: Client goal: [goal]. Program length: [X weeks/sessions]. Relevant intake info: [paste intake answers if available].

Objective: Design a phased program outline that gives the client a visible sense of progress.

Constraints:

- Structure into 3-4 named phases – not just 'Week 1, Week 2...'
- Each phase needs a one-line objective stating what shifts for the client by its end
- Avoid generic phase names – tie them to this client's actual goal

Output format: Phased outline, each phase with: name, one-line objective, and what's covered.

Quality bar: A client reading this should feel there's a clear arc.

EXPECTED OUTPUT

A phased program map.

HOW TO USE THE OUTPUT

Reference before planning each individual session.

EXAMPLE

Goal: 'build confidence pitching to investors' → phases become *Foundation, Execution, Refinement*.

SYSTEM CONNECTION

Built from Welcome & First Session Setup and intake data. Referenced by every subsequent Operator in this Module.

Individual Session Planner

WHEN TO USE THIS

Before each session.

WHAT YOU NEED BEFORE RUNNING IT

Which phase/week they're in, their goal, and what was covered last session.

THE OPERATOR

Role: You are a session planning assistant helping a solo coach/consultant walk into every session with a clear, flexible plan.

Context: Client goal: [goal]. Current phase/week: [from Program Outline]. What was covered last session: [brief note].

Objective: Plan this session so it builds logically on the last one.

Constraints:

- Include one concrete action item to leave them with
- Keep talking points as prompts/questions, not a rigid script
- Reference the current phase's objective explicitly

Output format: Session objective (one line), 3 talking points or exercises, one action item.

Quality bar: I should be able to glance at this for 30 seconds before the session and feel prepared.

EXPECTED OUTPUT

A one-page session plan.

HOW TO USE THE OUTPUT

Review just before the session; use loosely as a guide.

EXAMPLE

Client in 'Execution' phase, last session covered pitch structure → this session focuses on delivery practice.

SYSTEM CONNECTION

Draws from Program Outline Builder's current phase. Feeds Session Recap & Action Items.

Session Recap & Action Items

WHEN TO USE THIS

Immediately after any session, same day.

WHAT YOU NEED BEFORE RUNNING IT

Your rough session notes, current phase, and whether anything milestone-worthy happened.

THE OPERATOR

Role: You are a coaching/consulting operations assistant turning session notes into a professional, motivating client recap.

Context: Raw session notes: [paste notes]. Current phase: [from Program Outline]. Notable win or milestone this session, if any: [describe, or state 'none'].

Objective: Produce a recap I can send today that reinforces progress and gives clear next steps.

Constraints:

- Do not invent details not present in my notes
- If a genuine milestone occurred, name it specifically and tie it to their effort
- Keep under 150 words
- Tone: [specify]

Output format:

1. One-sentence summary of what we covered
2. 2-3 key insights or decisions
3. Clear action items with implied timeframe
4. If applicable: specific acknowledgment of progress, tied to their effort

Quality bar: The client should read this in 30 seconds and know exactly what to do next.

EXPECTED OUTPUT

A ready-to-send recap, with milestone acknowledgment built in when relevant.

HOW TO USE THE OUTPUT

Send same-day via your usual client channel.

EXAMPLE

Notes mention the client delivered their pitch live for the first time → recap names this specifically.

SYSTEM CONNECTION

Draws from Individual Session Planner. Recap history compounds into Progress Report Generator and Case Study Builder (System 4).

S3.M2 Client Check-ins

Mid-Program Check-in

WHEN TO USE THIS

At a natural midpoint of the program — a scheduled pulse-check.

WHAT YOU NEED BEFORE RUNNING IT

Current phase/week and your honest read on how things are going.

THE OPERATOR

Role: You are a client-relationship assistant helping a solo coach/consultant check in meaningfully.

Context: Client is at [phase/week] of [total length]. My general read on how it's going: [your honest impression].

Objective: Write a check-in message that invites honest feedback, including negative feedback.

Constraints:

- Ask a specific question about their experience, not just 'how's it going?'
- Make it clearly safe to give critical feedback
- Do not pre-frame the message with your own positive assumption

Output format: One message, under 80 words, ending in one specific, open question.

Quality bar: A client who's quietly unhappy should feel genuinely invited to say so.

EXPECTED OUTPUT

One check-in message.

HOW TO USE THE OUTPUT

Send at the program's natural midpoint, regardless of confidence level.

EXAMPLE

Instead of 'How are you finding the program?' the question becomes 'What's been the most and least useful part so far?'

SYSTEM CONNECTION

If feedback reveals disengagement, connects to Stuck Client Re-Engagement.

Stuck Client Re-Engagement

WHEN TO USE THIS

A client has become noticeably less responsive or engaged.

WHAT YOU NEED BEFORE RUNNING IT

Brief context on what's changed.

THE OPERATOR

Role: You are a client-care assistant helping a solo coach/consultant re-engage a disengaging client with genuine care.

Context: What's changed: [brief description – e.g., missed last 2 sessions, responses have gotten shorter].

Objective: Write a message that checks in on them as a person first, and doesn't make them feel caught or judged.

Constraints:

- Lead with care, not with the missed commitments
- Do not guilt them about attendance or responsiveness
- Leave the door open for them to pause or adjust without it feeling like a failure

Output format: One message, under 90 words, warm and non-judgmental, ending with a low-pressure invitation.

Quality bar: The client should feel cared for, not caught out.

EXPECTED OUTPUT

One ready-to-send re-engagement message.

HOW TO USE THE OUTPUT

Send as soon as disengagement is noticed.

EXAMPLE

Client missed two sessions without explanation → message opens with genuine care, no reference to the missed sessions directly.

SYSTEM CONNECTION

Often triggered by Mid-Program Check-in feedback. Connects to 'Not Ready to Continue' Response (System 4) if engagement doesn't recover.

S3.M3 Progress Tracking & Program Close

Progress Report Generator

WHEN TO USE THIS

Periodically through the program to make progress visible and concrete.

WHAT YOU NEED BEFORE RUNNING IT

Notes/metrics from recent sessions.

THE OPERATOR

Role: You are a progress-reporting assistant turning scattered session notes into a clear, motivating summary.

Context: Notes/metrics from the last [X weeks]: [paste notes].

Objective: Produce a progress summary that makes coaching work feel concrete.

Constraints:

- Only reference progress actually supported by the notes
- Balance acknowledging wins with honestly noting what's still in progress
- Avoid vague language like 'great progress!' – be specific about what changed

Output format: A short summary: key wins (specific), what's currently in progress, and what's next.

Quality bar: The client should finish with concrete proof the engagement is working.

EXPECTED OUTPUT

A shareable progress summary.

HOW TO USE THE OUTPUT

Share at a natural progress-check moment, or proactively if needed.

EXAMPLE

Notes show consistent completion of action items plus one week-4 breakthrough → summary calls out both.

SYSTEM CONNECTION

Builds from accumulated Session Recaps. Feeds End-of-Program Wrap-Up and Case Study Builder (System 4).

End-of-Program Wrap-Up

WHEN TO USE THIS

As the program concludes — the bridge moment into retention/renewal.

WHAT YOU NEED BEFORE RUNNING IT

Their starting point and what's been achieved.

THE OPERATOR

Role: You are a program-closing assistant helping a solo coach/consultant end an engagement well and open a natural path to what's next.

Context: Starting point: [X]. What's been achieved: [Y]. Program name: [name].

Objective: Write a wrap-up that honors the journey and naturally opens a conversation about continuing.

Constraints:

- Do not force a renewal pitch into the wrap-up itself
- Be specific about the journey from start to current state
- End with a genuine, low-pressure opening for a next-steps conversation

Output format: A wrap-up message: journey summary, key wins, and one natural line opening the door to what's next.

Quality bar: This should feel like a meaningful close, with the next-step opening feeling like a natural continuation.

EXPECTED OUTPUT

A complete wrap-up message.

HOW TO USE THE OUTPUT

Send at the final session or immediately after.

EXAMPLE

Client started unable to pitch confidently, ended pitching live to investors → wrap-up traces that arc.

SYSTEM CONNECTION

The explicit handoff into System 4 — triggers Testimonial Request and Renewal Reminder.

SYSTEM 4

Retention & Growth

INPUT

A satisfied client finishing or mid-way through delivery (System 3)

PROCESS

Surface upsell opportunities → capture proof of results → generate referrals

OUTPUT

Extended/renewed revenue + social proof + new leads → feeds back into System 1: Acquisition

S4.M1 Upsell & Renewal

S4 • Retention & Growth

Natural Upsell Opener

WHEN TO USE THIS

A client is finishing a program and had a genuinely strong result.

WHAT YOU NEED BEFORE RUNNING IT

Their result, and what a logical next offer looks like.

THE OPERATOR

Role: You are a client-growth strategist helping a solo coach/consultant open a continuation conversation around the client's next goal.

Context: Client's result: [specific result]. Next logical offer/tier: [description].

Objective: Write a message that opens the door to continuing, framed around what's next for them.

Constraints:

- Do not use the words 'package,' 'buy,' or 'purchase' in the opening
- Reference the specific result achieved, not generic praise
- End with a genuine question, not a hard pitch

Output format: One message, under 100 words, ending with an invitation to talk about what's next.

Quality bar: The client should feel this is a natural continuation, not a sales sequence kicking in.

EXPECTED OUTPUT

One ready-to-send message.

HOW TO USE THE OUTPUT

Send at the natural high point — right after a strong result or at End-of-Program Wrap-Up.

EXAMPLE

Client hit their pitch-confidence goal → message opens around 'what's the next challenge for you.'

SYSTEM CONNECTION

Directly follows End-of-Program Wrap-Up. If declined, connects to 'Not Ready to Continue' Response.

Renewal Reminder

WHEN TO USE THIS

Proactively, before the final session.

WHAT YOU NEED BEFORE RUNNING IT

How many weeks/sessions remain, and whether renewal has been mentioned yet.

THE OPERATOR

Role: You are a proactive renewal strategist helping a solo coach/consultant open the renewal conversation with enough runway.

Context: Weeks/sessions remaining: [X]. Has renewal come up yet: [yes/no].

Objective: Open the renewal conversation early, tied to their continued momentum.

Constraints:

- Frame around their goal's next stage, not the calendar
- Avoid urgency/scarcity language
- Leave clear room for a 'not yet' without awkwardness

Output format: One message, under 90 words, opening the conversation with time to actually have it.

Quality bar: A client reading this should feel thought-of, not chased before the clock runs out.

EXPECTED OUTPUT

One proactive renewal-opening message.

HOW TO USE THE OUTPUT

Send with 2-3 sessions of lead time before program end.

EXAMPLE

Program ending in 3 weeks, renewal not discussed → message opens with 'I wanted to start thinking together about what comes after.'

SYSTEM CONNECTION

Works alongside Natural Upsell Opener — this one is time-triggered, the other result-triggered.

Not Ready to Continue Response

WHEN TO USE THIS

A client has declined to continue.

WHAT YOU NEED BEFORE RUNNING IT

Their stated (or implied) reason, if known.

THE OPERATOR

Role: You are a relationship-preservation assistant helping a solo coach/consultant respond gracefully to a 'no.'

Context: Reason given, if any: [reason, or 'none given'].

Objective: Write a response that respects their decision, leaves the door genuinely open, and offers one lighter-touch option only if it's a real fit.

Constraints:

- Do not re-pitch the same offer in different words
- If offering a lighter option, only include it if genuinely different and lower-commitment
- No guilt, no 'are you sure?' pressure

Output format: One message, under 80 words, gracious and clean, with an optional lighter-touch offer only if contextually appropriate.

Quality bar: This client should feel comfortable coming back or referring someone.

EXPECTED OUTPUT

One graceful response message.

HOW TO USE THE OUTPUT

Send promptly after the 'no.'

EXAMPLE

Client declines renewal citing budget → response offers a low-cost monthly check-in call as the only alternative.

SYSTEM CONNECTION

Downstream of Natural Upsell Opener or Renewal Reminder when the answer is no. Protects the loop back to System 1 via future referrals.

S4.M2 Proof & Referrals

Testimonial Request

WHEN TO USE THIS

Right after a client achieves a specific, nameable result.

WHAT YOU NEED BEFORE RUNNING IT

The specific result and program/service context.

THE OPERATOR

Role: You are a testimonial-collection assistant helping a solo coach/consultant get high-quality, specific testimonials.

Context: Client's specific result: [result]. Program/service: [name].

Objective: Write a request message that makes it easy for the client to respond with a genuinely useful testimonial.

Constraints:

- Include 2-3 specific guiding questions the client can answer instead of writing from scratch
- Questions should surface concrete before/after detail, not vague praise
- Keep the ask itself brief and low-pressure

Output format: One request message with 2-3 embedded guiding questions.

Quality bar: A busy client should be able to give a strong, specific testimonial in under 5 minutes.

EXPECTED OUTPUT

One ready-to-send request with guiding questions built in.

HOW TO USE THE OUTPUT

Send within days of the result while it's fresh.

EXAMPLE

Client landed a promotion using pitch skills built in the program → questions ask specifically about before-state, what shifted, and outcome.

SYSTEM CONNECTION

Feeds directly into Case Study Builder. Testimonial content becomes raw material for System 5's content Operators.

Case Study Builder

WHEN TO USE THIS

After collecting a testimonial or clear result, to turn it into a structured, reusable asset.

WHAT YOU NEED BEFORE RUNNING IT

Starting point, brief process, result, and (if applicable) whether this client also sent a referral worth acknowledging.

THE OPERATOR

Role: You are a case-study writer turning a client's journey into a structured, credible story.

Context: Starting point: [X]. Brief process/approach: [what we did]. Result: [Y]. If this client also referred someone: [yes/no – note to include a brief thank-you line if yes].

Objective: Produce a structured case study I can use across sales and content materials.

Constraints:

- Do not fabricate quotes – use a clear placeholder for the client's actual words
- Keep the process section brief – this is about the transformation
- If a referral thank-you is relevant, keep it to one warm, genuine sentence

Output format: The problem → the approach → the result → a quote placeholder → (if applicable) one referral acknowledgment line.

Quality bar: This should be usable directly in a proposal, sales page, or content – without further rewriting.

EXPECTED OUTPUT

A structured, ready-to-use case study.

HOW TO USE THE OUTPUT

Use in proposals, on your sales page, and repurpose into content via System 5.

EXAMPLE

Client's testimonial + referral of a colleague → case study includes the transformation story with a genuine one-line thank-you.

SYSTEM CONNECTION

Built from Testimonial Request. Feeds Case Study to Content Repurposer (System 5) and sales materials (System 1).

Referral Request

WHEN TO USE THIS

After a client has had a clearly positive experience.

WHAT YOU NEED BEFORE RUNNING IT

The result/experience that makes now a good moment to ask.

THE OPERATOR

Role: You are a referral-request assistant helping a solo coach/consultant ask naturally, without it feeling transactional.

Context: Client's result/experience: [description].

Objective: Write a warm, low-pressure referral ask that makes it easy to say yes.

Constraints:

- Reference their specific positive experience before making the ask
- Make the ask feel optional and easy, not obligatory
- Keep it to one clear ask – do not bundle with other requests in the same message

Output format: One message, under 80 words, warm context followed by one clear, easy referral ask.

Quality bar: The client should feel flattered to be asked, not solicited.

EXPECTED OUTPUT

One ready-to-send referral request.

HOW TO USE THE OUTPUT

Send as a standalone message at a genuine high point.

EXAMPLE

Client had a breakthrough result → message references that win, then asks if they know anyone facing a similar challenge.

SYSTEM CONNECTION

When a referral comes in, flows directly into System 1's Pre-Call Research Brief — the literal loop-closing connection of the product.

SYSTEM 5

Visibility

INPUT

Case studies/testimonials from System 4, plus ongoing expertise

PROCESS

Produce consistent content → sharpen positioning → nurture the audience

OUTPUT

Inbound interest and warm leads → feeds back into System 1: Acquisition

S5 · Visibility

Weekly Content Batch Generator

WHEN TO USE THIS

Once a week, to plan content in advance rather than deciding daily.

WHAT YOU NEED BEFORE RUNNING IT

Who you help and what problem you solve, in one line.

THE OPERATOR

Role: You are a content strategist helping a solo coach/consultant plan a week of posts without starting from a blank page each day.

Context: I help [audience] with [core problem/service].

Objective: Generate 5 distinct content angles for this week.

Constraints:

- Each idea must use a genuinely different angle: a client win, a common mistake, a myth to bust, a quick actionable tip, and a personal story/lesson
- Each idea should be specific enough to write immediately
- Avoid generic 'AI-sounding' hooks

Output format: 5 ideas, each as a one-line hook plus a one-line note on what the post would actually say.

Quality bar: I should be able to pick any one and start writing immediately.

EXPECTED OUTPUT

5 ready-to-develop content ideas for the week.

HOW TO USE THE OUTPUT

Batch-write or batch-record all 5 in one sitting.

EXAMPLE

Audience: solo consultants → ideas include a client win, the myth that busier means more successful, a personal pricing-mistake story.

SYSTEM CONNECTION

The 'client win' angle draws from Case Study Builder (System 4). Output feeds the Content Calendar asset.

Case Study to Content Repurposer

WHEN TO USE THIS

After a case study exists — turning one proof point into a week's worth of content.

WHAT YOU NEED BEFORE RUNNING IT

The finished case study from System 4.

THE OPERATOR

Role: You are a content repurposing specialist turning one case study into multiple standalone pieces of content.

Context: Case study: [paste case study].

Objective: Produce 3 short-form posts, each taking a genuinely different angle on the same story.

Constraints:

- Each post under 150 words
- Angle 1: focus on the specific problem/before-state
- Angle 2: focus on the turning point/approach
- Angle 3: focus on the result and what it means for someone similar
- Keep client details appropriately anonymized unless explicit permission is noted

Output format: 3 labeled posts, each self-contained and postable without further editing.

Quality bar: Someone reading all 3 shouldn't feel like they're seeing the same post reworded.

EXPECTED OUTPUT

3 distinct, ready-to-post pieces of content.

HOW TO USE THE OUTPUT

Spread across the week rather than posting all three at once.

EXAMPLE

One case study about a pitch-confidence breakthrough → a 'before' post, a 'process' post, and a 'results' post.

SYSTEM CONNECTION

Downstream of Case Study Builder (System 4). Feeds the Weekly Content Batch and Content Calendar asset.

Discovery Call Insight to Content

WHEN TO USE THIS

After any sales conversation where a prospect revealed something genuinely telling about their struggle.

WHAT YOU NEED BEFORE RUNNING IT

A specific quote or paraphrase from a recent call, fully anonymized.

THE OPERATOR

Role: You are a content writer turning a real sales-conversation insight into content that speaks directly to your audience's actual language and pain.

Context: Anonymized insight from a recent call: [paste paraphrase – no identifying details].

Objective: Turn this into one piece of content that speaks to that exact pain point.

Constraints:

- No identifying details of any kind
- Write in the voice of addressing the reader directly ('if you've ever felt...')
- Keep to one clear idea, not a general essay

Output format: One post or short video script, under 150 words, built entirely around that one insight.

Quality bar: Someone in your audience facing that exact issue should feel 'this is speaking directly to me.'

EXPECTED OUTPUT

One piece of content grounded in a real (anonymized) conversation.

HOW TO USE THE OUTPUT

Post as-is, or use as a hook for a longer piece.

EXAMPLE

A prospect said (paraphrased) they 'keep raising prices then panicking and offering a discount anyway' → becomes a post about that exact gap.

SYSTEM CONNECTION

Sourced from System 1 discovery calls. A parallel content input alongside Case Study repurposing.

Newsletter/Email Draft

WHEN TO USE THIS

On your regular email cadence — weekly or biweekly.

WHAT YOU NEED BEFORE RUNNING IT

This week's topic or theme, and any relevant update.

THE OPERATOR

Role: You are an email copywriter helping a solo coach/consultant stay genuinely useful in someone's inbox.

Context: Topic/theme: [topic]. Any current offer or availability to mention: [detail, or 'none this week'].

Objective: Write an email that delivers real value first, with a soft, secondary mention of my offer/availability.

Constraints:

- Value/insight section must stand alone even if the offer mention were deleted
- No hard sell – the offer mention should be one line, easy to skip
- Avoid generic newsletter openers ('Hope this finds you well')

Output format: Hook opening → one useful insight or story → soft offer/availability mention → simple sign-off.

Quality bar: A reader who never buys anything should still feel the email was worth reading.

EXPECTED OUTPUT

One ready-to-send newsletter email.

HOW TO USE THE OUTPUT

Send on your regular cadence, adjusting the topic weekly.

EXAMPLE

Topic: a lesson from a recent client session (anonymized) → insight stands alone, with one soft availability line.

SYSTEM CONNECTION

Feeds the Nurture Sequence over time. Can draw from Discovery Call Insight to Content or Case Study repurposing.

S5.M2 Positioning

Bio/About Page Writer

WHEN TO USE THIS

When setting up or refreshing a platform profile.

WHAT YOU NEED BEFORE RUNNING IT

Your audience, the outcome you help them achieve, and your general approach.

THE OPERATOR

Role: You are a positioning copywriter helping a solo coach/consultant write a bio that filters in the right clients.

Context: Audience: [audience]. Outcome I help them achieve: [outcome]. My approach/method: [brief description].

Objective: Write a bio that's specific enough to immediately signal 'this is for me' to the right reader.

Constraints:

- No generic phrases ('passionate about helping people,' 'results-driven')
- Must name the specific audience and outcome explicitly
- Keep to 3-4 sentences for a short bio, note it can extend for a full About page

Output format: One short-form bio (3-4 sentences) and one longer About-page version (150-200 words) built from the same core positioning.

Quality bar: A stranger reading this should know exactly who it's for and self-select in or out.

EXPECTED OUTPUT

Two bio versions — short and long — sharing the same positioning.

HOW TO USE THE OUTPUT

Short version for platform bios, long version for a website About page.

EXAMPLE

Audience: solo consultants raising their prices → bio names that specifically.

SYSTEM CONNECTION

Draws from Signature Framework Namer for consistent positioning language.

Signature Framework Namer

WHEN TO USE THIS

Once you have a repeatable method or process you use with clients.

WHAT YOU NEED BEFORE RUNNING IT

A plain description of your actual process/steps with clients.

THE OPERATOR

Role: You are a positioning strategist helping a solo coach/consultant name their existing process as a distinct, ownable framework.

Context: My process with clients, in plain language: [describe steps/approach].

Objective: Name this as a signature framework and write a short description usable across marketing materials.

Constraints:

- The name should reflect the actual method, not be a generic buzzword mashup
- Description must be concrete enough that someone understands what actually happens
- Avoid overpromising language in the description

Output format: 3 name options for the framework, and a 2-sentence description of the strongest option.

Quality bar: The final name should feel credibly referenceable in a sales conversation, not purely invented for marketing.

EXPECTED OUTPUT

Framework name options plus a working description.

HOW TO USE THE OUTPUT

Use consistently across your bio, website, proposals, and content.

EXAMPLE

A 3-phase process (assess, rebuild, sustain) for pricing confidence → 'The Pricing Reset Method.'

SYSTEM CONNECTION

Once named, appears in Bio/About Page Writer, Custom Proposal Draft (System 1), and Program Outline Builder (System 3).

S5.M3 Nurture

Nurture Sequence Outline

WHEN TO USE THIS

Once you have any list of subscribers/followers who haven't yet become clients.

WHAT YOU NEED BEFORE RUNNING IT

Your offer and general audience.

THE OPERATOR

Role: You are an email sequence strategist helping a solo coach/consultant build trust with new subscribers before making an offer.

Context: Offer: [offer]. Audience: [audience].

Objective: Design a 5-email sequence that builds genuine trust/value before any ask.

Constraints:

- Only the final email should contain a direct offer mention
- Each earlier email must deliver standalone value
- Avoid manufactured urgency or countdown-style pressure tactics

Output format: 5 emails outlined by: subject line idea, core content focus (one line), and purpose within the sequence.

Quality bar: Someone who never converts should still feel the sequence was worth reading in full.

EXPECTED OUTPUT

A 5-email sequence outline, ready to draft in full.

HOW TO USE THE OUTPUT

Draft each email individually and schedule as an automated welcome sequence.

EXAMPLE

New subscriber sequence for pricing-focused coaching → emails 1-4 deliver standalone insights, email 5 makes a clear offer.

SYSTEM CONNECTION

Its final email's non-responders flow into Lead Re-Engagement & Recovery (Mode C, System 1).

The 7 System Chains

Cross-System workflows showing how a client moves through multiple Systems at once.

C1: First Client Win → Full Loop

C2: The Objection-to-Close Save

C3: The Silent Client Rescue

C4: End-of-Program to Referral Engine

C5: Cold List to Booked Call

C6: One Case Study, Full Content Week

C7: The Referral Fast-Track

3 Bonus System Assets

Client Intake Form

- Business/goal snapshot
- Current challenges
- Desired outcome (specific + measurable)
- Timeline expectations
- Communication preferences
- Past attempts/what hasn't worked

SYSTEM CONNECTION

Feeds System 2's Client Intake Questions Generator and System 3's Program Outline Builder.

Content Calendar Template

- Week
- Content Angle (win/mistake/myth/tip/story)
- Platform
- Status (idea/drafted/posted)
- Repurposed From (case study/discovery call/etc)

SYSTEM CONNECTION

Populated directly from System 5's Content Engine Operators.

Pricing Tier Sheet

- Tier name
- Price
- What's included
- Ideal client
- Upsell path to next tier

SYSTEM CONNECTION

Works with System 1's Tiered Package Proposal and System 4's Upsell/Renewal Operators.

THE CLIENT ENGINE

Version 1.0

This is a living system, not a one-time document. Updates are provided as AI tools evolve.
